

Summary Checklist

How to Get Started — A Guide for Sigma Administrators

Use this checklist to confirm you've addressed each planning area in this guide. Not every item will apply to your organization — check off only what's relevant to your use case.

Use Case Plan

- ☐ Identified who this use case is for
- ☐ Defined the workflow or decision it needs to support
- ☐ Confirmed data source ownership and access
- ☐ Set a target go-live date

Security

- ☐ Selected an authentication method
- ☐ Defined account types for each group of users
- ☐ Organized users into Teams
- ☐ Structured Workspaces to match Teams
- ☐ Established a license upgrade request process
- ☐ Requested Security Portal and Support Portal access

Cloud Warehouse Connection Strategy

- ☐ Decided on a connection strategy (one connection vs. multiple, sizing, PrivateLink, Python queries)
- ☐ Implemented data security (RLS/CLS, OAuth vs. service account)
- ☐ Configured write-back access, if needed

AI Features and Strategy

- ☐ Configured an AI provider
- ☐ Decided which agents users can access
- ☐ Decided whether to enable the Sigma MCP Server and/or MCP tools for agents
- ☐ Considered agent skill configuration for builders
- ☐ Set cost controls (token limits, AI usage table)
- ☐ Aligned on an AI strategy across your tech stack

Branding

- ☐ Built a custom theme (colors, fonts, layout, table style)
- ☐ Set up a custom homepage
- ☐ Set organization timezone and locale
- ☐ Configured organization translation files, if needed

Versioning and Promotion (WDLC)

- ☐ Set up version tagging for Dev/QA/Prod promotion
- ☐ Applied Protected tags where promotion needs controlled approval
- ☐ Considered managing data models as code via the API

Onboarding Training Plan

- ☐ Decided on a training plan (live, self-paced, or both)
- ☐ Linked training resources from your custom homepage
- ☐ Considered how to foster a user community

Auditing and Cost Monitoring

- ☐ Enabled audit logging
- ☐ Set up an audit logs storage integration for retention beyond 30 days
- ☐ Gave power users access to usage and cost data
- ☐ Set up warehouse cost monitoring
- ☐ Defined a process for deprecating unused content
